## PLASTIC SURGERY

COVID-19 screening is an important new requirement for patients being seen in medical offices and/or undergoing elective procedures. As we begin to see patients in the office and perform procedures, some new policies will be in effect:

- 1) A very limited number of patients at a time will be seen in the office. All accompanying family or friends will be asked to stay in their car and wait for the patient outside.
- 2) Our staff will be wearing masks and appropriate personal protection equipment (PPE), and **all patients will be required to wear masks upon presenting to the office.**
- 3) No patient or WEPS team members will enter the office without being screened.
- 4) All patients will be screened by the accompanying questionnaire as well as have their temperature and Oxygen Saturation taken upon arrival to the office. This screening process will take place in the Atrium outside the office and is in place for patient safety as well as the safety of the office staff. A temperature greater than 100.4 or a concern based on the screening questionnaire will necessitate a postponement of your visit and a recommendation for follow-up with your primary care physician.
- 5) The office and exam rooms will be wiped down and properly cleaned between each patient.
- 6) If there is a backlog of patients in the screening area, patients who are being seen will be asked to wait in their car for 10 minutes, then return to the screening station. (The previous patient will have left, and the office will have been wiped down with virucidal wipes.)

If you are having a non-invasive or minimally invasive procedure, you will also be required to swish and gargle with Colgate Peroxyl 1.5 % hydrogen peroxide prior to your treatment. We will provide Colgate Peroxyl 1.5 % hydrogen peroxide for you.

If you are scheduled for an operative procedure, a few more requirements will be in place for your safety. Pre-operatively, patients will be asked to obtain a COVID-19 test at Sibley Hospital or other approved testing site. This will require an order from our office which we will fax in, as well as an appointment made by the patient for testing. If your testing is done at Sibley, they will reach out to you to schedule your appointment. **TESTING MUST BE PERFORMED NO MORE THAN 72 HOURS BEFORE PROCEDURE.** The results must be received by the office no later than the day prior to your procedure. This assures testing within the week of your procedure, but that results are returned in time for your procedure. **Additionally, patients and anyone else staying with the patient, must self-quarantine between the time of their test and the time of their surgery. Caregivers must complete the accompanying questionnaire as well, in order to minimize risk to the patient's recovery.**

We realize that these requirements may seem burdensome, but in our current situation, this is in the best interest of your health and the health of those around you. We appreciate your participation in our efforts to assure your safety and maximize your health and outcomes.

Thank you,

Deb Schrag BSN, MSN
